

Figure 1: t-SNE plot showing the relationship between Mother Steroid status and tSNE1. The plot displays two main clusters of points, one on the left (tSNE1 < -0.5) and one on the right (tSNE1 > 0.0). The 'Mother Steroid' status is indicated by color: blue for 'False' and orange for 'True'. The 'False' points are more numerous and form a larger cluster on the left, while the 'True' points are fewer and more scattered, with some appearing in the right cluster.

- False

- True
