#### Overview

- Introduction
- 2 Materials
- 3 Literature Survey I (Dominguez-Bello et al., 2016)
- 4 Literature Survey II (Fettweis et al., 2019)
- Methods
- 6 Results
- Proceedings
  References

# Introduction

### Microbiome

- Microbiota: the microorganisms which live inside & on humans (Turnbaugh et al., 2007)
- Microbiome:  $10^{13}$  to  $10^{14}$  microorganisms whose which collective genome (Gill et al., 2006)

Figure: Concept of a core human microbiome (Turnbaugh et al., 2007)

### rRNA

- Ribosomal RNA
- Well-known as a key to phylogeny (Olsen & Woese, 1993)

# Premature (Preterm Birth)

Figure: Definitions of Premature (Tucker & McGuire, 2004)

∴ Hence, in this study,

• Premature: < 37 weeks

• Normal:  $\geq$  37 weeks

### Materials

### 16S rRNA Sequencing

**16S rRNA sequencing** is the *reference method* for bacterial taxonomy & identification (Mignard & Flandrois, 2006) Reasons (Janda & Abbott, 2007):

- 16S rRNA exists in almost all bacteria
- Functions of the 16S rRNA has not changed over time
- 16S rRNA is large enough for bioinformatics

### Train/Test Data vs. Validate Data

- Train/Test data
  - Helixco: Data collected by Helixco
- Validate data
  - EBI (European Bioinformatics Institute): Data collected by Dominguez-Bello et al., 2016
  - HMP (Human Microbiome Project): Data collected by Fettweis et al., 2019

Table: Metadata of Data

Data	Participants	Samples	Remarks
Helixco	24	107	-
EBI	18	1016	Only Normal
HMP	1572	9205	Only Premature

Literature Survey I (Dominguez-Bello et al., 2016)

#### BRIEF COMMUNICATIONS

Partial restoration of the microbiota of cesarean-born infants via vaginal microbial transfer

Maria G Dominguez-Bello<sup>1,2</sup>, Kassandra M De Jesus-Laboy<sup>2</sup>, Nan Shen<sup>3</sup>, Laura M Cox<sup>1</sup>, Amnon Amir<sup>4</sup>, Antonio Gonzalez<sup>4</sup>, Nicholas A Bokulich<sup>1</sup>, Se Jin Song<sup>4,5</sup>, Marina Hoashi<sup>1,4</sup>, Juana I Rivera-Vinas<sup>7</sup>, Keimari Mendez<sup>7</sup>, Rob Knight<sup>4,8</sup> & Jose C Clemente<sup>3,9</sup> estimated 15% of births that require C-section delivery to protect the health of the mother or baby  $^{11}$ .

Here we exposed C-section-delivered infants to their maternal vaginal fluids at birth and longitudinally determined the composition of their microbiato ta oassess whether it developed more similarly to vaginally born babies than to unexposed C-section-delivered infants. We collected samples from 18 infants and their mothers, including 7 born vaginally and 11 delivered by scheduled C-section, of which four were exposed to the maternal vaginal fluids at birth (Supplementary Table 1). Birely, the microbial restoration procedure, or vaginal microbial transfer, consists of incubating sterile gauze in the vagina of moth-

#### EBI Data II

- Study Objectives
  - Compare Vaginally vs. Cesarean-section (C-section)
  - 2 Restore the microbiota of C-section
- Microbial restoration procedure
  - Measure maternal vaginal pH
  - 2 Put sterile gauze with saline solution in vagina for 1 hour
  - Swab the infant with the gauze
- Sample collection procedure
  - Sample at right after birth, day 3 and weekly for the first month
  - Sample from oral, forehead, arm, foot and anal
- Notable Methods/Results
  - Using distance methods: e.g. UniFrac distance, Hamming distance

Literature Survey II (Fettweis et al., 2019)

### HMP Data II

- Study Objectives
  - Predicting & Preventing premature
  - Report community resources
  - Provide an analysis of the longitudinal, comprehensive, multi-omic profiling of vaginal samples
- Sample collection Procedure
  - 1 Premature birth vs. Matched normal birth
  - 2 Ethnically diverse cohort
- Notable Methods/Results
  - Imitate figures

### HMP Data III

### Methods

### Qiime 2 Workflow

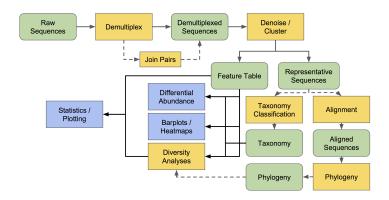

Figure: QIIME 2 workflow (Bolyen et al., 2019; Mandal et al., 2015; McDonald et al., 2012)

# Filitering with Quality Score I

#### Drawback between:

- Longer sequence read
- Higher quality value

 $\therefore$  I select the length n where:

$$\forall n_i \in \{n_k | \text{MedianQualityScore} \ge 30\}$$
  
$$\exists! n \in \{n_i\} : n \ge n_i$$
 (1)

# Filitering with Quality Score II

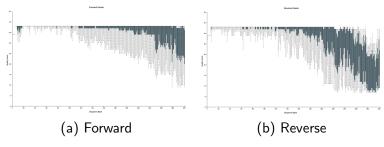

Figure: Sequence Quality Plot from Helixco Data

Maximum Length: 265

# Filitering with Quality Score III
